

The Centers for Disease Control and Prevention (CDC) invites you to attend a Public Availability Session to learn about the formaldehyde study.

You are invited to learn more about testing of air quality in FEMA-supplied trailers and mobile homes.

CDC will host public availability sessions to discuss the findings of their study on formaldehyde in FEMA-supplied trailers and mobile homes.

A 30-minute presentation will be given at the start of each session. A public availability session is an informal meeting where community members can talk one-on-one with CDC scientists about health concerns.

The same information will be discussed at all sessions.

The following topics will be discussed

- results of testing conducted from December 21, 2007 until January 22, 2008,
- how the tests were conducted, and
- other health-related information.

FEMA will also be at each of the sessions to provide information about the relocation of FEMA-supplied trailer and mobile home residents to other housing.

Date:	Time:	Place:	Address:
March 3	10 am - 12 noon	Pearlington Recovery Center	6098 First Avenue, Pearlington, MS 39572
